

Boyne Survey Secondary Plan

Project:

Boyne Survey Secondary Plan

Client:

Town of Milton, Ontario

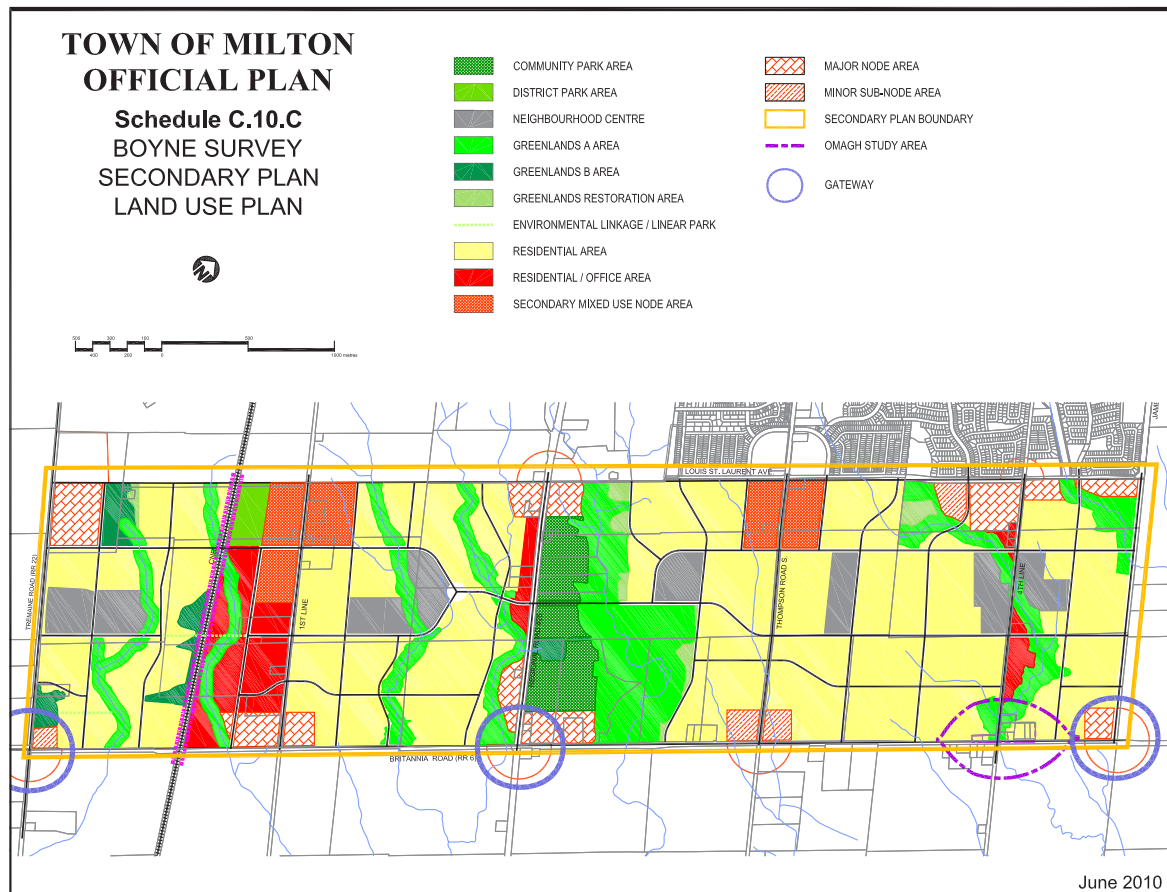

The Opportunity:

Development of a comprehensive secondary plan and master plan which creates a complete community supportive of active transportation.

MSH Genuine Results

MSH led a multi-disciplinary team in the preparation of a Master Plan and Secondary Plan for Boyne Survey - Phase 3 in a series of major expansions to the Milton Urban Area. Building on the "vision" and policy framework in the Town's Official Plan, the Plan reinforces the strong sense of community and the natural environment already evident in Milton today. The project included the preparation of related implementation documents such as urban design guidelines and zoning regulations.

The Secondary Plan accommodates a population of approximately 50,000 residents, and includes a range of mixed use nodes, high density residential/office areas and residential neighbourhoods designed to contribute to the creation of a complete, diverse, and healthy community that supports walking, cycling and transit opportunities.
